

National Wildland Fire Outlook September 1 to September 30, 2005

Fire Potential

	Normal		Below Normal
	Above Normal		Critical
	Not in Fire Season / No Observations		

The National Wildland Fire Outlook is based on standardized NFDRS Energy Release Component (ERC) values. The fire potential categories displayed on this map provide expected departure from average conditions for the outlook period.

Map produced by the Intelligence-Predictive Services Section at the National Interagency Coordination Center, Boise, Idaho
